

ImmunoSpot® S6 Ultra M2

This model enables advanced three-color FluoroSpot work, in addition to single- and double-color enzymatic ELISPOT analysis using white light. It excels at high-throughput counting of live and dead PBMC, which can be a rate-limiting step in ELISPOT/ FluoroSpot assays. Equipped with an additional tunable backlight, and enabled by a dedicated BioSpot™ Software Suite, the Ultra M2 is also a high-end reader for colorimetric and fluorescent neutralization and infectivity assays. This model is high-throughput capable, handling up to 400 plates per run when equipped with our automated plate loader. It has been designed for professionals working in the regulated or academic fields.
